

Hi,

“We are rapidly getting to the point where the single most important medium that people have is their wireless device, (smartphone or tablet). It's with them every single moment of the day.”

My name is Bob Fagnant and I want to be your ***Partner for Success!!***

(I know, this sounds kinda “corny” doesn't it, but please..., keep reading)

Small business owners have come to realize that mobile usage is not going away any time soon, in fact the number of smart phone users and their growth are seeing record number of increases year after year.

Land line phones are a thing of the past with many households using only their mobile phones when at home.

Let me ask you, “Have you considered targeting this massive demographic of mobile users by ***Mobilizing your Business?***”

Consumers today, more than ever before, are using their mobile devices to find businesses, research businesses and connect with businesses. Did you know that half of all Internet searches today for local services and products are taking place on mobile smart phones and devices?

Don't believe me? Just take a look around and you will realize very fast that people are GLUED to their smart phones.

In spite of this, small to medium local businesses are missing out when it comes to mobile marketing and reaching their target market via the fastest growing marketing medium ever, the mobile Internet.

WE CAN HELP in this area!! We have developed a mobile *CityApp* for the City of Providence, RI and local businesses and for the community.

Our cloud-based *CityApp* is designed for smartphone users, *BUT*, can also be viewed by those who do not have a smartphone. i.e.: desktop computers and laptops. This way we can reach all members of the community who have access to the internet...not just those who have smartphones.

You can view a LIVE version of it here:

Thank you for your time,

Best Regards,

Robert Fagnant
